

The Psychological Recession Index, v2 · United States, 2010-2026 · macro-divergent psychiatric exposure

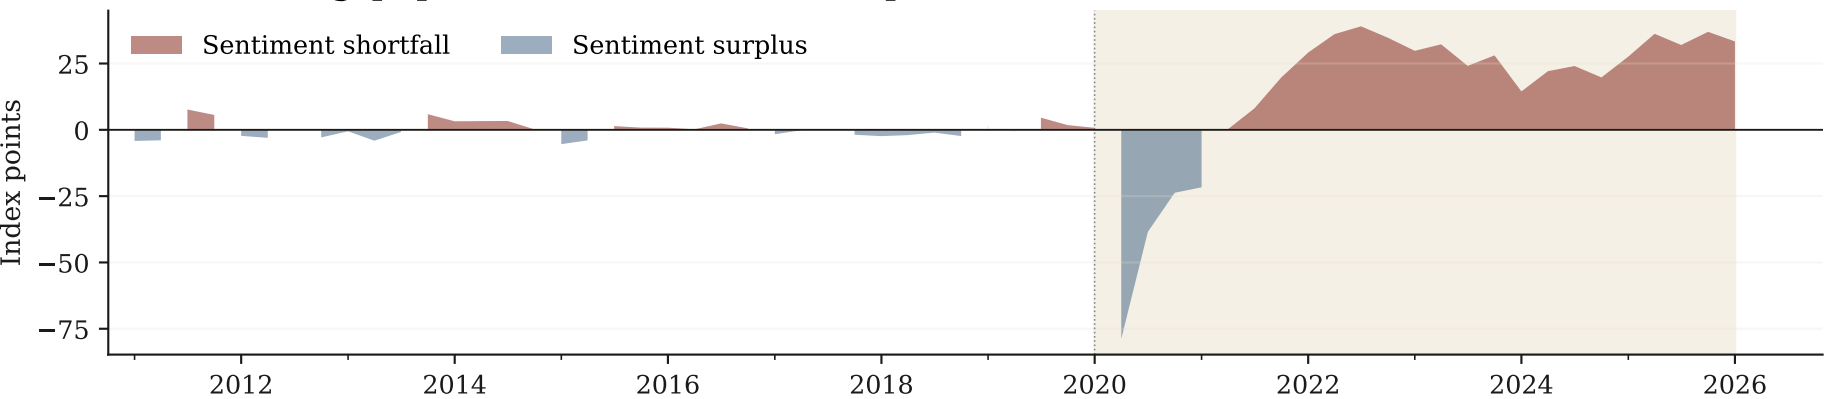

A. Consumer sentiment: observed vs. what the macro state predicts

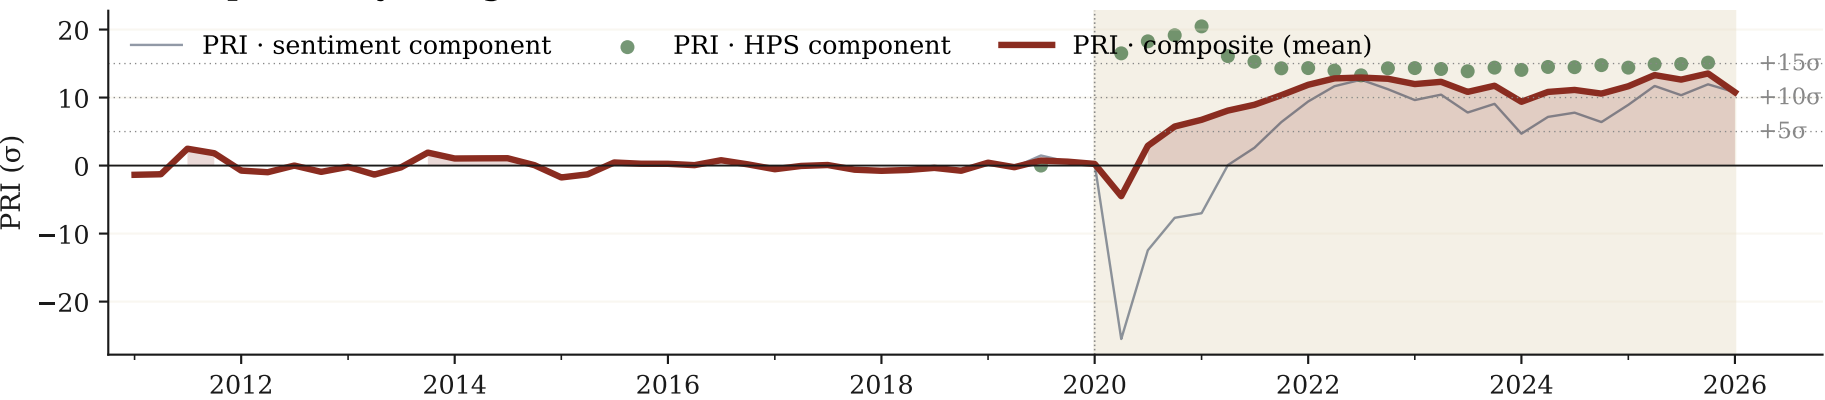

B. Direct psychiatric outcome: HPS adult anxiety+depression vs. pre-pandemic NHIS

C. Sentiment gap (predicted – observed, index points)

D. Composite Psychological Recession Index (σ above 2010-2019 baseline)

Sources: BLS via FRED (UNRATE, PAYEMS, JTSJOL); Surveys of Consumers, University of Michigan via FRED (UMCSENT, ©); U.S. Census Bureau / CDC NCHS Household Pulse Survey (HPS, modified PHQ-2 + GAD-2); NHIS 2019 (Vahratian et al., MMWR 2021). Model: OLS $UMCSENT \sim UNRATE + \Delta PAYEMS_{yoy} + \log(JTSJOL)$, trained 2010Q1-2019Q4; PRI = standardized residual. Composite = mean of available standardized residuals.
